## Maintenance and repairs

We undertake mechanical reconditioning on your generator in a professional manner within a few days. Design optimisation is often included.

One of our particular strengths is pressing new or refurbished shafts in and out and tightening loose shafts while retaining intact rotor windings. We balance rotors up to 8 t in accordance with the standard.

We carry out generator maintenance and alignment on the facility and process slip rings in our repair workshop.

We create high-quality new windings from round and profile wire. It is very important for us to ensure that generators have the longest possible service life.

*Elektromotoren*

We can supply you with

new and reconditioned wind generators,

- often already optimised
- in exchange or to rent
- with dismantling and installation on request
- and a whole lot more. Please do not hesitate to contact us.

We can offer you

- 50 employees
- 60 years of experience
- 6.000 motors from stock
- small 690 V motors
- flexibility

My father, Kurt Kraus, founded our business in 1950 and I took over the company from him in 1985.

Healthy growth and enthusiasm for our work are what set us apart. Our customers benefit from this every day!

Just take a look or pop in:
